6.0L and 6.4L harnesses will be wired
for Ford alternator and '94-05 Dodge
A/C compressor

Special Notes:

Tachometer Set-Up: (circle one)

Swaphelper.com Tach Helper or Other (please specify)

Upon receiving your harness, DCS will inspect it for damage and verify all the necessary components are present for harness completion. Note: Additional charges may apply if some connectors need replacement. If your harness service is not pre-paid you will receive a call from a DCS sales representative when complete to collect payment and process shipping. DCS wiring services are done on a first come first serve basis. Please allow a 4 week lead time for harness work to be completed. If you are shipping your harness internationally, please write "For Repairs" on the outside of your package to avoid transportation entry fees.
